

10-Day Spring Boot Bootcamp - Daily Use Cases

Day1

Use Case: Create Employee Management project using Spring Initializr, configure MySQL, run app, explain dependencies.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day2

Use Case: Build Employee CRUD REST APIs; test with Postman; proper HTTP codes.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day3

Use Case: Create JPA entities, repositories, relationships, derived queries.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day4

Use Case: Implement layered architecture, DTOs, validation, global exception handling.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day5

Use Case: Add profiles, logging, pagination, file upload, external configuration.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day6

Use Case: Implement JWT login, protected APIs, role-based authorization.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day7

Use Case: Write unit tests (Mockito) and controller tests (MockMvc).

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day8

Use Case: Integrate Swagger, Actuator, scheduling, async tasks, caching.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day9

Use Case: Dockerize application, Maven build, Git workflow, deployment pipeline.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).

Day10

Use Case: Capstone: Complete Employee Management API with security, testing, documentation, deployment.

Daily Tasks: Design, implement, test, debug, explain architecture and answer review questions mapped from the Q&A; preparation document (dependency injection, DTOs, exception handling, JWT, layered architecture, testing, scalability).
